

Business Recovery Insurance Claims Kit (B.R.I.C.K)

In order to maximize the likelihood of surviving a business interruption, copies of critical assets must be stored off site in a secure environment so that they are immediately accessible. These are typically identified through the creation of a Business Continuity Plan (BCP) and can include legal contracts, supplier information, copies of software, installation codes and insurance policies. The list is business specific and potentially very long. We could go on forever. What good was their identification and collection if they can be destroyed by the same circumstances that caused the scenario requiring them?

Doesn't make much sense does it?

The Fortress BRICK service offers aid in identifying or verifying critical business assets through an existing BCP. Customers may choose from a variety of secure, fire, water and electromagnetically resistant containment options. All containers are rendered tamper proof to ensure only the client has access to the contents, not even Fortress. All are stored in a secure, environmentally controlled environment and available for access at a clients request at anytime.

The Fortress BRICK service should be considered your company's first step should you not have a current formal DRP. Contact us or visit our web site for further details.

Your business may depend on it!
