

Business Continuity Consulting

“Business Continuity describes the processes and procedures an organization puts in place to ensure that essential functions can continue during and after a business or process halting event. Business continuity planning seeks to prevent interruption of mission-critical services, and to reestablish full functioning as swiftly and smoothly as possible.”

Prevention is Better than Cure...

A plan for keeping your business up and running in the face of small and large-scale interruptions is becoming a requirement for most organizations. Possibilities range from the loss of an important file to an e-mail outage to fire, theft and full-scale natural disasters (i.e. fire, flood, etc.) The key to success is striking a balance between being

prepared and living within a budget that makes sense for your organization.

The Business Continuity Plan (BCP) is the foundation of your business continuance effort. It enables your firm to maintain operations and credibility, should a wide range of disruption scenarios occur. Without a solid BCP, you cannot effectively recover from any significant disruption.

Fortress offers a host of consulting service offerings to meet any need. Our typical approach to Business Continuity Plan (BCP) development is to work closely with the client organization's staff to codevelop a comprehensive plan specific to our clients recovery requirements and objectives. This provides a smart, reasonable, and cost-effective approach to maintaining your firm's business stability and provides the necessary knowledge to update the plan internally as your organization evolves.

Continuity needs can be diverse as every business has different requirements. Contact your Fortress representative to setup a complimentary consultation to discuss what we can do for you.

Your business may depend on it!
