

Remote Backup Service (RBS)

Consider for a moment what position you would be in if your customer database, e-mail files, or any other business critical asset were to suddenly disappear or become corrupt? What if your office was the victim of a business halting event or disaster? Viruses, hardware failure, human error, software corruption and sabotage are just a few of the risks. Statistics show that it's not matter of "if" these will happen, rather "when". Without a means of recovery the results can be catastrophic to you and your business. You can protect your critical assets and lay the groundwork to overcome any of these obstacles by incorporating the Fortress Remote Backup Service (RBS) into your corporate processes, policies and Disaster Recovery Plan (DRP).

Fortress RBS: Set It and Forget It

We do all the work! Fortress RBS can easily be configured to apply to any scenario or policy. Rest assured that your business critical files have all been

encrypted and backed up remotely to our secure Data Server with redundant duplication to the Fortress Data Vault. Additionally, configurations can be made for local backup to electronic or hard media. With Fortress RBS you can easily perform a restoration of the most current or previous backup versions to any authorized computer. With point of origin military strength encryption, your data is always safe. Not even Fortress Admins can decrypt and view them.

Automate Your Backup Strategy

Unlike other remote data storage or file sharing solutions, Fortress RBS does not require FTP clients or web browsers. Gone are the time consuming manual steps of initiating the backup and file transfer. Using our built in scheduler, the software can easily be configured to perform backups of your critical files on any schedule whether you are at your workstation, LAN server or not. It's all automated once configured! Fortress RBS can even run as a background service and perform backups while you are working and files are in use. As added security, backups are monitored by Fortress so if they do not complete for any reason, you are notified immediately and the situation rectified. No other solution can help guarantee the secure storage of your most important digital assets.
